UNIVERSITY FACULTY SENATE FORMS
Academic Program Approval

This form is a routing document for the approval of new and revised academic programs. Proposing department should complete this form. For more information, call the Faculty Senate Office at 831-2921.

Submitted by: Melinda K. Duncan phone number 0533

Action: Request for New Graduate Degree “PSM in Biotechnology”
(Example: add major/minor/concentration, delete major/minor/concentration, revise
major/minor/concentration, academic unit name change, request for permanent status, policy change, etc.)

Effective term 010J
(use format: 04F, 05W)

Current degree
(Example: BA, BACH, BACI, HBA, EDD, MA, MBA, etc.)

Proposed change leads to the degrees of: PSM (Professional Science Master’s)
(Example: BA, BACH, BACI, HBA, EDD, MA, MBA, etc.)

Proposed names: Professional Science Master’s (PSM) in Biotechnology
Proposed new name for revised or new major / minor / concentration / academic unit
(if applicable)

Revising or Deleting:

Undergraduate major / Concentration:
(Example: Applied Music – Instrumental degree BMAS)

Undergraduate minor:
(Example: African Studies, Business Administration, English, Leadership, etc.)

Graduate Program Policy statement change:
(Attach your Graduate Program Policy Statement)

Graduate Program of Study:
(Example: Animal Science: MS Animal Science: PHD Economics: MA Economics: PHD)

Graduate minor / concentration:

List program changes for curriculum revisions: N/A

List new courses required for the new or revised curriculum:
BISC872, MAST697, MAST698, BUAD500

Other affected units:
ANFS, BUAD, UAPP, MISY, ENTR, PLSC, MAST, CHEM, HESC, ENWC, CISC, CHEG, CPEG,
ELEG, MEEG, NURS, PHYT, STAT. The chairs of all affected units have been contacted and given
approval.
Rationale:
(Explain your reasons for creating, revising, or deleting the curriculum or program.)
Professional Science Master's (PSM) degrees have been developed by the Council of Graduate Schools in conjunction with the Sloan Foundation to fill a need for workers trained at an advanced level in the Sciences whose background is broader than that found in the graduate of a traditional MS program. PSMs are designed as terminal degrees serving a similar role to the MBA degree for business graduates, by providing a comprehensive science curriculum that trains graduates to work in interdisciplinary teams that are expected to function in a business setting. The Professional Science Master's in Biotechnology seeks to train students in the advanced biological topics necessary to have a comprehensive understanding of modern life science research, provides exposure to related fields such as bioengineering, statistics, chemistry and bioinformatics and trains students to think about business/organizational management issues. The course work requirements of the degree are integrated by a “capstone” experience, which in most cases is expected to consist of an internship in a business setting. The target audience for this degree is expected to be diverse and will include both full-time students and part-time students who currently hold full-time employment in the field.

Program Requirements:
(Show the new or revised curriculum as it should appear in the Course Catalog. If this is a revision, be sure to indicate the changes being made to the present curriculum.) See attached

See Attached.

ROUTING AND AUTHORIZATION: (Please do not remove supporting documentation.)
Department Chairperson: ___________________________ Date: 10/2/2009
Dean of College: ___________________________ Date
Chairperson, College Curriculum Committee: ___________________________ Date
Chairperson, Senate Com. on UG or GR Studies: ___________________________ Date
Chairperson, Senate Coordinating Com.: ___________________________ Date
Secretary, Faculty Senate: ___________________________ Date
Date of Senate Resolution: ___________________________ Date to be Effective: ___________________________
Registrar: ___________________________ Program Code: ___________________________ Date
Vice Provost for Academic Programs & Planning: ___________________________ Date
Provost: ___________________________ Date
Board of Trustee Notification: ___________________________ Date
Resolution for the Faculty Senate Agenda (if a resolution is required)

WHEREAS, the proposed Professional Science Master’s (PSM) in Biotechnology is an interdisciplinary graduate course of study covering the scientific underpinnings of the biotechnology revolution, the management of the interdisciplinary teams necessary to bring biotechnology advances to the marketplace and the ethical/regulatory issues pertinent to these technological advancements and

WHEREAS, there has been much interest over several years from individuals with diverse backgrounds and interest in pursuing advanced graduate studies in biotechnology relevant to the business environment, and

WHEREAS, the experience of the Department of Biological Sciences with graduate level training in the life sciences in collaboration with Departments ranging over all seven Colleges of the University of Delaware provide existing courses and a foundation for the program, and

WHEREAS, the proposed program contributes to three milestones on the University’s "path to prominence": to become a premier research and graduate university; to achieve excellence in professional education; and the engaged university, be it therefore

RESOLVED, that the Faculty Senate recommends approval provisionally, for five years, the establishment of a new major leading to the Professional Science Master’s in Biotechnology, effective June 1, 2010.
Graduate program proposal
Professional Science Master’s in Biotechnology

I. DESCRIPTION
Professional Science Master’s (PSM) degrees have been developed by the Council of Graduate Schools in conjunction with the Sloan Foundation to fill a need for workers trained at an advanced level in the Sciences whose background is broader than that found in the graduate of a traditional MS program. PSMs are designed as terminal degrees serving a similar role to the MBA degree for business graduates, by providing a comprehensive science curriculum that trains graduates to work in interdisciplinary teams that are expected to function in a business setting. The Professional Science Master’s in Biotechnology seeks to train students in the advanced biological topics necessary to have a comprehensive understanding of modern life science research, provide exposure to related fields such as bioengineering, statistics, chemistry and bioinformatics and foster an understanding of business/organizational management issues. The course work requirements of the degree are integrated by a “capstone” experience which in most cases is expected to consist of an internship in a business setting. Students completing the program will have a broad exposure to both the scientific underpinnings of biotechnology and how these are applied practically in industrial settings and will be well prepared to take on diverse roles in the biotechnology industry. This will be assessed by both surveys of students and internship mentors and long term tracking of career trajectories (see assessment plan for more detail)

II. RATIONALE AND DEMAND
A. Institutional factors.
   1. In May of 2008, the University of Delaware unveiled its “Path to Prominence” strategic plan. Objective III of the strategic plan it to achieve “Excellence in Professional Education” to meet the needs of a world where a bachelor’s degree is no longer enough. In fall 2009, President Harker has highlighted the Professional Science Master’s initiative as important progress towards the Excellence in Professional Education objective during town hall meetings with UD faculty (see Powerpoint presentation at http://www.udel.edu/udaily/2010/sep/townhalls091509.html.
   2. The planning process began in late fall of 2008 in consultation between the Graduate Program Director of Biological Sciences, Melinda K. Duncan Ph.D., members of the Delaware Bioscience Industry Association and John Sawyer Ph.D., current Associate Provost for Professional Education, UD about the need to professional training opportunities in biotechnology at the Masters level in the
State of Delaware. Drs. Duncan and Sawyer applied for and were awarded a program development grant from the Delaware Valley Innovation Network in March of 2009. Since then, the curriculum has been designed in consultation with an industrial advisory board comprised of managers based in Delaware biotechnology industries, onsite discussions with mid-level managers at local biotechnology companies, the faculty of the Department of Biological Sciences, the chairs of the Departments of Computer science and Chemistry as well as the Dean’s and the chairs of affected Departments from the Colleges of Health Sciences, Agriculture and Natural Resources, Arts and Sciences, Alfred Lerner College of Business and Economics, Engineering, Education and Public Policy, and Earth, Oceans and Environment.

3. The impact of this program on University programs will be to increase the enrollment in graduate courses in biotechnology related fields and it will require the offering of business related content. Commitments have been obtained from all affected units to provide this.

4. The proposed curricula would more fully utilize existing resources since it will provide enrollment for some currently undersubscribed courses in the life sciences, particularly those taught outside of the College of Arts and Sciences.

B. Student demand

1. The current goal is to enroll 10 new graduate students per academic year in this program. The enrollment numbers are derived from inquiries of potential applicants to the Department of Biological Sciences seeking such programs and discussions with leaders in Delaware Biotechnology industry. These students are projected to be new to the university since this program will address currently unfulfilled demand for a program that provides training at the interface between science and business.

2. This curriculum is primarily intended to meet the needs of full-time students who desire Master’s level training to prepare them for careers in biotechnology industry. However, efforts are ongoing to move a significant proportion of the content to evening or online offerings to meet the needs of working professionals.

C. Transferability

We expect few to no students to transfer into this from other UD degree programs, although students pursuing graduate certificates, particularly the biotechnology certificate, will be encouraged to enroll. All applicable UD coursework taken as a student
in other programs will transfer to this degree as long as it has not counted towards another UD degree. The exception is that all coursework applied to UD graduate certificates (that has not been applied to a degree) will be fully applicable to the PSM in Biotechnology.

D. Access to graduate and professional programs

N/A

E. Demand and employment factors

This degree seeks to prepare students for employment in the Biotechnology industry. The Delaware Valley Innovation Network Talent Gap Analysis for Delaware Valley Biotechnology industry (published Winter 2009, see http://www.delawarevalleyinnovationnetwork.com/reports/gap-analysis) has identified a need to increase the number of qualified biotechnology workers able to fill jobs in the growing biotechnology sector. This report also states that local industry currently has difficulty finding employees that have a strong, diverse scientific background coupled with communication, teamwork, leadership and business skills. The PSM in Biotechnology seeks to fill this gap.

F. Regional, state, and national factors

1. There are currently no comparable courses of study offered by any university in The State of Delaware. Both the Department of Biological Sciences University of Delaware and Department of Biological Sciences/Biotechnology, Delaware State University, offer MS degrees in Biological Sciences. However, neither existing program requires the business/scientific teamwork-leadership coursework of the Professional Science Master’s and neither requires an industrial internship. The National Professional Science Master’s Association lists 35 programs nationwide in biotechnology related fields. The only programs in our geographic area are George Washington University, Northeastern University, Pennsylvania State University, St. Johns University, State University of New York at Brockport, and University of Connecticut. There are no established programs in the Delaware Valley. The closest similar programs that are recognized Professional Science Master’s degrees are located at Temple University and Thomas Jefferson University (Philadelphia, Pennsylvania), The University of Maryland, Baltimore County (Baltimore, Maryland) and The University of Maryland, University College (Adelphi, Maryland). Of these, the only the Maryland schools have Professional Science Master’s in Biotechnology programs. The geographic distance between Baltimore and Delaware makes these programs very inconvenient for part-time students living and working in Delaware. Further, the
Maryland programs primarily serve the needs of Baltimore/Washington corridor biotech employers and would not draw new talent into the Delaware talent pool accessible to Delaware biotech employers.

2. There is no existing accrediting body for these types of program beyond the university level accreditation of Middle States. However, The Council of Graduate Schools formally recognizes Professional Science Master’s programs. The National Professional Science Master’s Association (NPSMA) is a collaboration of Professional Science Master's degree program directors, faculty, administrators, alumni, and students that supports PSM degree initiatives. The NPSMA publishes guidelines and best practices for PSM programs. The program has been designed to meet the recognition requirements (see http://www.scinemasters.com/PSMAffiliation/HowtoApplyforPSMAffiliation/tabid/116/Default.aspx). Further, the curriculum has been designed both in consultation with our industrial advisory board and other interested biotechnology industry representatives from the State of Delaware. This is a requirement for PSM recognition and ensures that students completing the program will have skills that meet the needs of potential employers. Upon program approval by the University of Delaware, we will seek recognition as a Professional Science Master’s program from the Council of Graduate Schools. NPSMA is currently investigating accreditation for such programs and may become the accrediting body for PSM programs. Once accreditation standards are developed, UD will apply for that accreditation. John Sawyer is the University of Delaware representative to the NPSMA. Upon recognition of PSM programs at Delaware, the University will become an institutional member.

G. Describe other strengths

1. The University of Delaware is uniquely positioned to offer the Professional Science Master’s degree in Biotechnology. Our focus reflects the academic strengths of our Faculty, our longstanding and ongoing commitment to biological sciences and the biotechnology industry, our existing and developing partnerships, and the unique characteristics of the region.

2. Strong research capabilities in Biotechnology and Bioinformatics at Bio-related research centers at the University of Delaware such as the Center for
Translational Cancer Research, the Avian Biosciences Center and the Center for Biomedical Engineering Research.

3. Delaware Biotechnology Institute: The institute was established in 1999 to promote research, education, and technology transfer for biotechnology applications to the benefit of the environment, agriculture, and human health.

4. Delaware Health Sciences Alliance: A partnership between the University of Delaware, Thomas Jefferson University, Christiana Care Health Systems, and The Nemours Foundation/Alfred I. DuPont Hospital for Children, to support joint and collaborative education, research, public outreach, and student internships.

5. The Delaware Valley region is a major center of biosciences industry.

6. 11.5% of new jobs in the Delaware Valley region are in the biosciences.

7. Every new biosciences job in the region supports 3.7 additional jobs.

8. Longstanding relationships with key bio industry companies such as AstraZeneca and DuPont.

9. Melinda Duncan and John Sawyer obtained a Department of Labor grant through the Delaware Valley Innovation Network to develop this program. In doing so we partnered with the Delaware Biosciences Association (DBA) to build the Industry Advisory Board for the program. DBA and several members of the industry advisory board will partner with the University of Delaware to provide internships and experiential learning opportunities for students in the program. The Office of Graduate and Professional Education is currently working to specify the form of the internships and the formal structure of these relations to assure that we will secure ample meaningful internships for the students.

10. An engaged industrial advisory board representing both small and large biotechnology firms with a presence in Delaware including; Siemens, DuPont, Thermo-Fisher, Fraunhofer, Incyte, Noramco, and WL Gore.

III. ENROLLMENT, ADMISSIONS AND FINANCIAL AID

A. The current enrollment goal is to admit 10 students per year into the program with a total of 20 students enrolled at any one time. This limit is based on the availability of seats in the graduate level classes and faculty/staff time available to provide appropriate academic advisement. If the program is successful and proves very popular in the future, it would be possible to admit additional students although additional faculty teaching and faculty/staff administrative resources would need to be identified to do so.

B. Admission Requirements
Applicants will be selected based on undergraduate and any prior graduate transcripts, letters of recommendation, strength of prior experience in the field, the GRE, and the TOEFL if applicable. See graduate program policy for details.

C. Student Expenses and Financial Aid
1. The majority of student financial support for this program is provided from the student’s resources supplemented through traditional financial aid mechanisms including loans.

D. Institutional Factors
Students completing this program will receive the Professional Science Master’s (PSM) degree. This is the appropriate form of recognition since it is distinctly different from traditional MS programs in that it 1) is intended to be a terminal degree 2) combines both science and business training 3) includes a required industrial internship experience.

E. Describe the curriculum
The PSM in Biotechnology requires 42 credits of graduate level course work consisting of:
1) 12 credits of graduate level course work in the biological sciences comprised of at least one course in each of the five following areas: Molecular Biology, Genetics, Cell Biology, Physiology and Microbiology (see list below)
2) 9 credits of graduate level courses in fields related to biotechnology including bioinformatics, engineering, chemistry, agriculture, food safety, health sciences and statistics (see approved list below). One class must be from the category “statistics” unless the student has prior coursework in statistics. This determination is made by the program director.
3) 15 credits of “Plus” courses, one from each of the following five categories: ethics, intellectual property/legal regulatory affairs, survey of business or public administration, leadership and organizations, and project management/decision making (see below).
4) Six credits of BISC 872, internship. The experiential portion of this class will in most cases be completed during a 7 month long, full-time internship at a biotechnology company and be supervised jointly by a representative of the host company and a University of Delaware faculty member. Students pursuing the PSM degree who have significant prior bench experience will be encouraged to focus their capstone on improving a company’s business/management plan or moving a newly developed product to market. Such projects could include: an analysis of how to bring a product to market, how to improve team interactions between company groups or how to scale up a research project to commercial scale. Students pursuing the PSM degree without prior experience working at the bench will be encouraged to focus their capstone on a specific scientific research question. Such projects could include: testing methods to increase production of recombinant proteins, testing the specificity of antibodies being developed or direct research product development. The capstone is assessed by the quality of the work performed at the internship and two written reports 1) a plan of work outlining the background of the project, the learning objectives for the internship and goals to be accomplished developed in consultation with and approved by both the faculty and internship mentors and 2) a scholarly paper outlining
the objectives of internship, what was accomplished on each objective and recommendations for future work. Internships may be full-time or part-time depending on the schedule/needs of the student and employer. Internships may be paid or unpaid with the final grade based on the written reports and mentor evaluation. Students who are employed in the field of biotechnology are encouraged to develop their capstone projects at their place of employment as part of a professional development plan, however the expectation is that the “capstone” will be different than the student’s normal job responsibilities.

Please see the attached graduate program policy for full details of the curriculum:

V. RESOURCES AVAILABLE
   A. Learning Resources
      See attached library assessment statement

   B. Faculty / Administrative Resources
      The program administrator is Melinda K. Duncan, Ph.D., Tenured Full Professor and Graduate Program Director, Department of Biological Sciences. She has been involved in the administration of graduate programs in Biological Sciences for the past 11 years and has served as the Biological Sciences Graduate Program Director since 2005. The coordination of the Plus curriculum and internships will occur in collaboration with John Sawyer, Ph.D., Tenured Full Professor, Department of Business Administration, Associate Provost for Professional Education. Drs. Duncan and Sawyer previously developed a joint Ph.D. in Biological Sciences/MBA program which graduated its first student in May 2009.

   C. External Funding
      Drs. Duncan and Sawyer have received funding from the Delaware Valley Innovation Network to provide the initial resources necessary to develop this proposal. A grant to fund part of the initial startup of the program is in preparation for submission to the National Science Foundation

VI. RESOURCES REQUIRED
   A. Learning Resources
      The learning resources necessary for basic implementation are generally in place in the form of existing graduate classes in the biological science and related fields. However, the Lerner College of Business is developing BUAD500, “Survey of Business” to provide the prerequisite training necessary to complete the “Plus” curriculum. In order to compete for both the highest caliber of student and to fulfill the needs of the part-time
student population in the future, additional sections of the most popular graduate classes will need to be offered after normal working hours, more courses will need to be developed in fields relevant to biotechnology industry such as fermentation, legal issues in biotechnology, and biotechnology business administration, and the University Office of Financial Aid will need to be more responsive to the needs of tuition paying graduate students.

B. Personnel Resources
The Department of Biological Sciences is currently very short of full time faculty to cover existing undergraduate and graduate course offerings. For this program to succeed and expand in the future, additional faculty members qualified to teach graduate courses relevant to biotechnology will need to be hired. In some cases, such faculty could be on supplemental contracts, however, full time faculty members are preferred to ensure the academic rigor of the program.

C. Budgetary Needs
Since the PSM in Biotechnology is a program with interdisciplinary coursework spread over all seven UD colleges, the tuition for students enrolled in the program will need to be apportioned to fairly compensate all participants. The budget policy for PSM programs is currently under negotiation among the College Deans since all seven UD colleges provide course content to this program.

The initial proposal from the Department of Biological Sciences is below:

1) 20% of tuition shall be for program administration including staff time, computer support, program marketing & recruiting, office supplies, teaching buyout and/or salary for the program administrator, etc.
2) The remaining 80% of tuition for classes taken outside of the College of Arts and Sciences will be sent to the College teaching the class.
3) The exception to this policy is the tuition generated due to BISC872, internship.
Mentoring of student internships will be time intensive for faculty members and there is currently no incentive for faculty members to take on this responsibility either in the Collective Bargaining Agreement or in contributions to faculty research programs. In order to provide faculty with incentives to perform this critical role, 60% of tuition generated for BISC872 will be returned to the faculty member mentoring the internship in a professional development account. The remaining 20% of the tuition will be retained in the College in which the faculty member holds primary appointment.
VII. IMPLEMENTATION AND EVALUATION

A. Implementation Plan

All classes for the program are either existing or are currently submitted to the challenge list for permanent numbers to be in place by fall 2010. The program will seek to quickly market the program immediately after program approval is obtained in order to matriculate at least a small class for fall 2010. At this time, the program director will identify faculty members willing to serve as faculty advisors/internship mentors. The program director in collaboration with John Sawyer, Associate Provost for Professional Studies and the Office of Graduate and Professional Studies, will develop a pool of prospective industrial internship mentors.

B. Assessment Plan

<table>
<thead>
<tr>
<th>Assessment plan PSM in biotechnology</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Objectives</strong></td>
</tr>
<tr>
<td>--------------------------------------</td>
</tr>
<tr>
<td>1. Train students in life science disciplines pertinent to biotechnology</td>
</tr>
<tr>
<td>Course work covering the disciplines of cell biology, molecular biology, genetics, microbiology, physiology</td>
</tr>
<tr>
<td>Course work covering biotechnology related disciplines including agriculture, chemistry, engineering, health sciences, statistics, lab science</td>
</tr>
<tr>
<td>2. Provide training in science related business, organizational management, legal issues, project management and ethics</td>
</tr>
<tr>
<td>---</td>
</tr>
<tr>
<td></td>

<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Program improvement will be an ongoing process. The results of the assessment measures will be shared with both the Industrial Advisory Board for the PSM in Biotechnology and the Graduate Affairs Committee, Biological Sciences. The curriculum will be modified as necessary to achieve the goal of producing graduates who apply the knowledge, skills and abilities gained from the PSM in biotechnology to their career.

**VIII. APPENDICES**

A. Graduate Program Policy
B. Accreditation Criteria (if appropriate)
C. Letters of Collaborative Agreement
D. Letters of Approval from Contributing Departments
E. Other Pertinent Documents
Professional Science Master’s (PSM) in Biotechnology
Program Policy

Part I. Program history

A) Statement of purpose and expectations for graduate study
The Professional Science Master’s in Biotechnology seeks to provide advanced, interdisciplinary didactic coursework in the life sciences, training in business applicable to scientific industry and experiential training in an industrial setting. Graduates will be poised to enter positions in diverse biotechnology industries.

B) Date of permanent status-pending

C) Degrees offered Professional Science Master’s (PSM) in Biotechnology

Part II. Admission

A) Admission requirements
Admission to the PSM in Biotechnology requires a prior scholastic index (grade point average on a 4.0 point scale) of at least 2.8 overall and 3.0 in the sciences. Those who meet the stated minimum requirements are not guaranteed admission, nor are those who fail to meet all those requirements necessarily precluded from admission if they offer other appropriate strengths.

There is also the possibility of entering the program after the successful completion of two courses of the Biological Sciences core with a grade of B or better (not B-) as a continuing education student and the achievement of an overall GPA of 3.0 in graduate classes attempted. Students may also be admitted after successful completion of the “Certificate in Biotechnology”.

Applicants who are not U.S. citizens or permanent residents must complete the Test of English as a Foreign Language (TOEFL) with a score of 550 or higher on the paper-based test or 79 or higher on the Internet-based test. Previous education, training or residence in the U.S. does not exempt foreign nationals from these requirements. Requests for a waiver of the language test requirements (for example, for students from English-speaking countries outside of the U.S., or for foreign students who have a college degree from a U.S. institution) must be approved by the University of Delaware Office of Graduate Studies. Students who need further training in English prior to attending graduate school may apply for admission through the University of Delaware English Language Institute’s Conditional Admission Program http://www.udel.edu/eli/programs_grad_cap.html.

The Graduate Record Examination is required of all applicants to the PSM in Biotechnology including those who have successfully completed the “Certificate in Biotechnology”.

B) Prior degree requirements
BA or BS degree, preferably in a science or engineering discipline

C. Application deadlines.
Fall admission: Full consideration deadline: January 15th with rolling admission to continue until May 1st for foreign nationals and July 1st for US citizens/permanent residents.
Spring Admission: Full consideration deadline: October 1st with rolling admission to continue until November 1st for foreign nationals, December 15th for US citizens/permanent residents.

D. Special competencies needed
Applicants are required to have completed, at the undergraduate level, the following (or the equivalent): two years of biological sciences; one year of mathematics, preferably to include calculus and/or statistics; one year of college physics; one year of general chemistry; and one course in organic chemistry.

E. Admission categories.
Provisional admission may be offered with the stipulation that any deficiency in undergraduate training be made up (without graduate credit).
Students with TOEFL scores below the minimum required for admission may be considered for conditional admission if they enter the University of Delaware English Language Institute’s academic English program.

F. Other documents required
Applications must also include three letters of recommendation from persons able to judge the applicant's ability to pursue graduate study, a resume or CV outlining work and/or academic experience in the field of biotechnology as well as an application essay consisting of the answers to the following questions:
1. What scientific research/employment experience have you had? Please be specific about the field of work and job responsibilities
2. What are your long-term professional objectives?
3. What specific attributes of our Department and the PSM in Biotechnology make you feel that this degree is appropriate to help you achieve your professional objectives?

G. University statement:
Admission to the PSM in Biotechnology program is competitive. Those who meet stated requirements are not guaranteed admission, nor are those who fail to meet all of those requirements necessarily precluded from admission if they offer other appropriate strengths.

Part III. Academic
A. Degree Requirements

I. List course requirements
The PSM in Biotechnology requires 42 credits of graduate level course work consisting of:
1) 12 credits of graduate level course work in the biological sciences comprised of at least one course in each of three of the five following areas: Molecular Biology, Genetics, Cell Biology, Physiology and Microbiology (see list below)
2) 9 credits of graduate level courses in fields related to biotechnology including bioinformatics, engineering, chemistry, agriculture, food safety, health sciences and statistics (see approved list below). One class must be from the category “statistics” unless the student has prior coursework in statistics. This determination is made by the program director.
3) 15 credits of “Plus” courses, one from each of the following five categories: ethics, intellectual property/legal regulatory affairs, Survey of business or public administration, Leadership and organizations and Project management/decision making (see below).
4) 6 credits of BISC 872, internship. The experiential portion of this class will in most cases be
completed during a 7 month long, full time internship at a biotechnology company and be supervised jointly by a representative of the host company and a University of Delaware faculty member. Students pursuing the PSM degree who have significant prior bench experience will be encouraged to focus their capstone on improving a company’s business/management plan or moving a newly developed product to market. Such projects could include; an analysis of how to bring a product to market, how to improve team interactions between company groups or how to scale up a research project to commercial scale. Students pursuing the PSM degree without prior experience working at the bench will be encouraged to focus their capstone on a specific scientific research question. Such projects could include: testing methods to increase production of recombinant proteins, testing the specificity of antibodies being developed or direct research product development. The capstone is assessed by the quality of the work performed at the internship and two written reports 1) a plan of work outlining the background of the project, the learning objectives for the internship and goals to be accomplished developed in consultation with and approved by both the faculty and internship mentors and 2) a scholarly paper outlining the objectives of internship, what was accomplished on each objective and recommendations for future work. Internships may be full-time or part-time depending on the schedule/needs of the student and employer. Internships may be paid or unpaid with the final grade based on the written reports and mentor evaluation. Students who are employed in the field of biotechnology are encouraged to develop their capstone projects at their place of employment as part of a professional development plan, however the expectation is that the “capstone” will be different than the student’s normal job responsibilities.

The program will make every effort to assist students with identifying internship opportunities and negotiating internship plans. However, students bear significant responsibility in this process as well and failure to either identify an internship and/or formulate an acceptable internship plan by the end of the student’s third semester of full time study (or completion of 33 credits of course work) is considered failure to make satisfactory progress towards degree.

**Biological Sciences (12 credits, four classes; must include classes from at least three of the five following categories)**

**Cell Biology**

- BISC 612- Advanced Cell Biology
- BISC 625- Cancer Biology
- BISC 671- Cellular and Molecular Immunology
- PLSC635- Plant Developmental Biology

**Credits**

- 3
- 3
- 4
- 3

**Genetics**

- BISC 654- Biochemical Genetics
- BISC 656- Evolutionary Genetics
- BISC 693- Human Genetics
- PLSC 636- Advanced Plant Genetics
- PLSC 605- Plant breeding

**Credits**

- 3
- 3
- 3
- 3
- 3

**Microbiology**

- ANFS 635- Animal Virology

**Credits**

- 3
ANFS 639- Food Microbiology  3
BISC 641- Microbial ecology  3
BISC 682- Bacterial Pathogens; molecular mechanisms  3
BISC 645- Bacterial Evolution  3
BISC 679- Virology  3
PLSC 619- Soil Microbiology  4
PLSC 629- Introduction to Fungi  4
MAST 618- Marine microbial ecology  3

**Molecular Biology**  
ANFS 670- Principles of Molecular Genetics  3
BISC 602- Molecular Biology of Animal Cells  3
BISC 665- Advanced Molecular Biology and Genetics  3
CHEM642- Biochemistry II  3

**Physiology**  
BISC 605- Advanced Mammalian Physiology  3
BISC 615- Vertebrate Developmental Biology  3
BISC 675- Cardiovascular Physiology  3
HESC 651- Neurophysiological Basis of Human Movement  3
HESC 654- Survey of Medical Physiology  3

**Biotechnology-related science courses** (three courses from the following list adding up to at least 9 credits, one must be from the category "statistics" unless the student has documented prior exposure to statistical analysis of data)

**Agriculture/food science:**  
ANFS 628- Food Chemistry  4
ANFS 629- Food Analysis  4
ANFS 633- Poultry pathology  3
ANFS 636- Immunology of domestic animals  3
ANFS 637- Avian immunology  3
ANFS 645- Food engineering technology  3
ANFS 649- Food biotechnology  4
ANFS 654- Advanced ruminant nutrition  3
BREG 603/PLSC 603- Soil physics  3
ENWC 611- Insect pest management  3
ENWC 610- Medical, Veterinary, and forensic entomology  3
ENWC 619- Biological control  3
ENWC 805- Insect-plant chemical ecology  3

**Bioinformatics:**  
ANFS 644- Bioinformatics  3
CISC 636- Introduction to bioinformatics  3
CISC 637- Database Systems  3
CISC 681- Artificial Intelligence  3
CISC 683- Introduction to data mining  3
CISC 841- Bioinformatics  3

17
MAST 697- Bioinformatics programming for Biologists 3
MAST 698- Environmental and systems bioinformatics 3

Chemistry/Biochemistry

PSM Plus component (15 credits):
Whereas students in Professional Science Master's Programs may have professional goals that would lead them into business and industry, or to government or non-profit employment, the University of Delaware offers two tracks for the PSM PLUS component.
PSM students will take at least 15 credits of PLUS coursework in addition to their science core. The University recommends the student follow one of the tracks below, however students may cross over tracks to fit their interest.

<table>
<thead>
<tr>
<th>Business/industry track</th>
<th>Government/non-profit track</th>
</tr>
</thead>
<tbody>
<tr>

*BUAD500 meets prerequisites for BUAD835, BUAD831 and BUAD871

2. Give non-registered requirements in detail; none

3. Give procedure for petitions for variance in degree requirements (e.g., course substitution policies, completion deadlines, etc.)
All petitions for course substitutions and variances in the completion deadlines must be made to the Graduate Affairs Committee, Department of Biological Sciences.

4. Define any grade minimums in courses that are different from University policy.

Only graduate courses completed with a grade of B or higher fulfill the biological sciences core and the biotechnology-related course requirements including the internship for the PSM in Biotechnology. Students receiving a B- or lower in a required core course are subject to dismissal from the program. However, they may file an appeal to the Department of Biological Sciences Graduate Affairs Committee for approval to retake the course and remain in the program. If the appeal is not approved, the Graduate Affairs Committee will recommend to the Office of Graduate Studies that the student be dismissed from the program.

Students must also earn a minimum index of 3.0 in all “plus” component courses attempted to earn the PSM in Biotechnology, and no course with a grade below a C- may be counted toward the degree.

5. Identify any courses, which may not be used towards the degree.

Only courses listed in the curriculum may count towards the degree unless a variance is granted by the Graduate Affairs Committee, Department of Biological Sciences.

6. Identify expectations of facility of expression in English (oral and written) as part of the degree requirement.
While there are no specific requirements, successful completion of the degree will require fluency in both written and spoken English.

B. Committees for exams, thesis, or dissertations
This degree has no thesis or dissertation requirements. The director of the program will compile a list of University of Delaware faculty members who are willing serve as academic advisors for PSM Biotechnology students. Students will select advisors from this list who have expertise
most appropriate for their career interests within the first two weeks after matriculation. The academic advisor in consultation with the program director will provide guidance on course selection and the academic advisor will also be responsible helping the student formulate the expectations for their internship experience and for evaluating the student’s capstone internship report.

It is highly encouraged that part-time students working in biotechnology-related fields work with both their UD academic advisor and employer prior to matriculation to develop a comprehensive professional development plan that coordinates PSM Biotechnology degree requirements with work responsibilities.

C. Timetable and definition of satisfactory progress towards the degree

1. Academic load

Full-time students will enroll in at least 9 credits of classes per semester (fall and spring), however, in order to complete the degree in two years, the student will need to enroll in 12 credits of classes at least two semesters. Part-time students are expected to enroll in at least one class per regular academic semester to remain matriculated in the program and are expected to complete their degree within five years.

Time line for degree:

Semester 1- enroll in 9 credits of coursework
Semester 2- enroll in 12 credits of coursework
Semester 3- enroll in 12 credits of coursework
Winter after semester 3- begin internship
Semester 4- enroll in BISC 872 internship and single remaining didactic course (Plus course taken during evening hours, 9 credits)
Summer after semester 3- sustaining status, complete internship and final report, graduate

Normal progress towards degree is reviewed for all students in the program at the end of every academic semester and is assessed based on grades, participation in program activities and performance in the internship.

2. Grade requirements (general and specific).

Only graduate courses completed with a grade of B or higher fulfill the biological sciences core and the biotechnology-related course requirements for the PSM in Biotechnology. Students must also complete BISC872, internship with a grade of at least B. Students receiving a B- or lower in a required core course are subject to dismissal from the program. However, they may file an appeal to the Department of Biological Sciences Graduate Affairs Committee for approval to retake the course and remain in the program. If the appeal is not approved, the Graduate Affairs Committee will recommend to the Chair of the Department of Biological Sciences that the student be dismissed from the program.

Students must also earn a minimum index of 3.0 in all “plus” component courses attempted to earn the PSM in Biotechnology.

All graduate courses successfully completed with a B or higher that were applied towards earned graduate certificates, but not graduate degrees, at the University of Delaware will be directly applicable to the PSM in Biotechnology.

N/A

N/A
5. **Forms required.**
The application for advanced degree must be filed with the Office of Graduate studies prior to the beginning of the last semester in the program

6. **Identify consequence for failure to make satisfactory progress.**
Students failing to make satisfactory progress towards degree will be identified by the Graduate Affairs Committee, Department of Biological Sciences, in consultation with the student’s academic advisor/program director. Recommendations for dismissal are made by the Department Chair of Biological Sciences to the University of Delaware Office of Graduate studies.

Students who feel that they have been graded inappropriately or receive what they perceive as an unfair evaluation by a faculty member may file grievances in accordance with University of Delaware policies. Students are encouraged to contact the Department's Graduate Program Director prior to filing a formal grievance in an effort to resolve the situation informally.

**Part IV. Assessment Plan**

Consistent with the Mission Statement presented earlier in this document, five student learning goals are defined. Students will:

1. Have advanced knowledge of the discipline of biotechnology
2. Have experience working with interdisciplinary teams on biotechnology
3. Achieve competence in scientific communication
4. Be knowledgeable in scientific business ethics
5. Understand the application of business/management theory to science

The specific goals stated above are mapped to various science and PLUS courses in the program Assessment Plan which guides program evaluation and is filed with the Center for Educational Effectiveness.

These goals are be assessed through multiple indicators including:

- Faculty evaluation of student progress in course work
- Survey of internship mentors
- Surveys of students and program alumni
- Faculty and internship mentor evaluation of the internship work and written products
- Employer surveys

Both short term and long term impacts are assessed.

**Part V. Financial aid**

Students enrolled in this program are responsible for their tuition and living expenses. Both the Department of Biological Sciences and University of Delaware Office of Financial Aid will provide assistance in identifying suitable fellowships, grants and loans to help finance their education.

**Part VI. Departmental Operations**

**A. General student responsibilities**

**Access to Student Records**

Students wishing to review their Departmental file must submit a written request to the Graduate Program Director at least 24 hours in advance. Students must review the file in the presence of departmental staff or faculty and are not permitted to remove a file from Wolf Hall but may photocopy documents from their folder. All access to student records is in accordance with the Family Educational Rights and Privacy Act.
Standards of Student Conduct

A) Academic honesty
All graduate students are subject to University of Delaware regulations regarding academic honesty.

B) Laboratory Safety and Research Regulations
Graduate students performing laboratory research are subject to all University regulations regarding safety, use of human subjects and animals, and hazardous/radioactive material use and disposal. These guidelines may be found in the University of Delaware Policies and Procedures Manual. Students participating in off campus internship experiences are expected to fully comply with all safety regulations of the workplace.

C) Contact information
It is the responsibility of all students to ensure that their contact information on file with the university is current (mailing address, phone number, email address). It is also the student’s responsibility to regularly monitor their email, phone and mail for important notices regarding their enrollment.

D) Departmental facilities
Occasionally student's graduate assistantship or other assignments may require the use of departmental laboratories or other facilities. Keys to laboratories, etc., are maintained in the Department office and will be issued based on faculty and Department Chair approval. Any assignments that require the expenditure of departmental funds (e.g. data collection activities) require departmental approval in advance and are processed through the department in which the work is to be done.
B) Guidelines for Formal CGS Recognition as a Professional Science Master’s (PSM) Program

The Professional Science Master’s (PSM) degree is a unique professional degree grounded in science and/or mathematics and designed to prepare students for a variety of career options in business, government, or non-profit organizations. The degree combines advanced coursework in science and/or math with an appropriate array of professional skill-development activities to produce graduates highly valued by employers and fully prepared to progress toward leadership roles. The PSM is designed to be self-contained and is not a traditional master’s degree earned en route to or from a PhD degree.

The following criteria are intended to provide guidance to faculty and institutions planning new PSM programs, or to assist leaders of existing programs who feel their programs meet the criteria to be recognized as a PSM or who wish to modify their programs in order to be recognized as a PSM. The following criteria are deemed important for a master’s program to qualify for PSM status.

- A majority of program course work in graduate-level science and/or mathematics courses in one or more disciplines. An interdisciplinary curriculum is highly desirable.
- A professional skills component (often called the “plus” component of a “science-plus degree”) that may consist of a variety of relevant courses and activities developed in consultation with prospective employers. Examples include business basics, legal and regulatory issues, finance and marketing, communication and teamwork, and are often developed in collaboration with appropriate academic units outside the sciences or taught by adjunct faculty from the targeted employment sector. In addition to courses and workshops, professional skills are usually enhanced by internships and problem-based projects sponsored by employers. The professional component should result in a portfolio of experiences recognized by and involving the client employers.
- Program quality assurance should be provided using the faculty-based mechanisms normally used by the institution for graduate programs in order to ensure institutional integration and sustainability. It is understood that the professional nature of the program may lead to substantial participation by non-academic practicing professionals, for example as adjunct faculty course instructors or student internship mentors.
- An active and engaged employer advisory board. Examples of board and/or individual-member functions include providing advice on the program curriculum, assisting with internships and placement, assisting with project-identification, and/or interacting individually with students.
- A commitment to report enrollment and degrees annually and an attempt to track the employment history of every graduate in order to help assess program outcomes and success.
- Agreement to use the name “Professional Science Master’s” and the PSM logo on Websites and advertising brochures. In turn the program will be listed on CGS national PSM websites and data bases, and will be included in CGS PSM promotional activities.

In order to use the trade-marked title and logo “PSM” institutions must apply to the Council of Graduate Schools for recognition as a PSM by addressing each of the above stated criteria and by submitting an application to profmasters@cgs.nche.edu.

Melinda,

Below is a summary of CANR departmental responses so far to your proposed PSM in Biotechnology. I have not heard back from the department of Animal and Food Sciences and will follow up with them again today.

Entomology & Wildlife Conservation (Judy Hough-Goldstein)
ENVC 602. Insect Physiology is not currently being taught, should be removed from list.
Otherwise, no concerns.

Food and Resource Economics (Tom Ilvento)
STAT 617 Multivariate Analysis - add to list
Otherwise, no concerns.

Plant & Soil Sciences (Blake Meyers)
PLSC 604 (Plant Molecular Biology) is not currently being taught. A good replacement on the list would be Dr. Nicole Donofrio’s course, (PLSC667, Molecular Plant Pathology, 3 credits).
PLSC 635 - Plant Developmental Biology (3 credits, Dr. Janine Sherrier). Add under Cell Biology.
PLSC 605 - Plant Breeding (3 credits, Dr. Jim Hawk). Add under Genetics.
Otherwise, no concerns.

Thanks.,

Tom

Melinda,

Our Animal and Food Sciences department has reviewed the PSM program in biotechnology and has no concerns with what you have proposed.

Can I suggest that we send one letter of endorsement (I'll prepare this) from all affected departments in our college for the PSM proposal? This might be more efficient, time-wise.

Thanks and let me know how you'd like to proceed now.

Best,

Tom

Subject: Re: FW: PSM in biotechnology

I have attached the working draft, the stuff at the end is what I am working on mostly can be ignored. The program is slightly different than you saw before because we realized that there were too many credits in the degree. Also, I had to delete any 667 course that is not on the current challenge list for a permanent course number this fall due to university guidelines, we would definitely be open to including these on an ad hoc basis in the future. (there were a few suggested from the ag school, I took the challenge list from what was listed as applying for permanent course numbers as of yesterday, I can add anything that just has not been put in the computer yet).

Something else, I think some of the offerings listed from ANFS may be lab classes (not sure from the course descriptions). If so, I would still like to include them but would move their category from "agriculture" to "lab science".

Thanks again.

Melinda,

We shall be happy to make available seats in graduate courses in Chemistry and Biochemistry, which will serve as electives in your proposed 'professional science masters' degree. As a proviso, I cannot guarantee the availability of space for all comers at all times, but in general the enrollment in our graduate courses does not exceed applicable limits.

Please let me know if you require anything else in this regard. We wish you much success with this new initiative.

Regards, Klaus Theopold

Klaus and Brian,
I am working on a professional science masters in biotechnology curriculum that I would like to start through the academic approval process this fall. I would like to include several graduate level biochemistry/chemistry courses as electives in this program and would like to chat with one of you about the possible availability of seats in these courses for students enrolled in this program in the future as well as the possibility of getting a letter of support from your department confirming that students in this program would have access to your classes. I am available most of the summer for a meeting although I am out of town on Monday and Tuesday of next week if you would like to meet in person.

Best,

Melinda

Melinda,

I thought of one additional course after we spoke (Clinical Neuroscience). I have spoken with the instructors and have secured their permission to allow a modest number (<5) of non-PT students to register for each of these courses. Here is the information on the three courses:

1) **PHYT809 Psychosocial Aspects of Health and Disease**
   Course Description
   Discusses the psychosocial characteristics of patient populations and therapists that impact on the rehabilitation process. Death and dying, social implications of illness diagnosis and other topics are discussed.

2) **PHYT606 Research**
   Course Description
   An overview of methodological issues in the conduct of physical therapy research. Topics include scientific method, experimental design, statistical procedures and technical writing. Student expected to critically analyze current physical therapy literature. [Melinda, this course has been totally revamped with a greater emphasis on the review and interpretation of the literature.]

3) **PHYT623 Clinical Neuroscience**
   Course Description
   A study of the structure and function of the human nervous system with major emphasis on the cause-effect relationships between lesions and their symptoms. Emphasis on the neural mechanisms controlling movement.

Hope this is helpful –

Dear Melinda,

The College of Health Sciences enthusiastically supports your plans to establish a Professional Science Masters in Biotechnology, and with agreement from the Director of the School of Nursing and the Chair of the Department of Health, Nutrition and Exercise Sciences, we offer the following courses for use as electives in your program:

HESC 601  Research Methods
HESC 651  Neurophysiological Basis of Human Movement
HESC 667  Medical Physiology
HESC 687  Nursing Sciences Research
NURS 621  Advanced Pathophysiology
NURS 622  Advanced Pharmacology
NURS 638  Health Services Evaluation

As the program matures and the academic needs evolve, we will be happy to review and amend our course contributions as necessary.

Sincerely,

James G. Richards, PhD
Deputy Dean, College of Health Sciences

Subject: Biotechnology masters requires your approval

Dear Anette, Norm and Gonzalo,

A new professional masters degree in Biotechnology is being established at UD and we have been asked if we would allow the program to list some engineering courses as electives. To do so requires your support.

This is being organized by Melinda Duncan in Biological Sciences. In order for this to get university approval, Melinda will need confirmation from you (e-mail should suffice) stating that you are willing to allow courses in your department to be listed in the catalog as electives.

Some of the students in this program will have undergrad degrees in engineering and, of course, the prerequisites will remain intact so only qualified students will be allowed to take these courses. They do not anticipate many students taking engineering courses, but the inclusion of engineering courses will add breadth to the program.
I support this and believe it would be good to allow this new program to include our courses.

The courses proposed are listed below (these are from the current UD catalog):

CHEG 604 Probability and statistics for engineering 3
CHEG 617 Colloid science and engineering 3
CHEG 620 Biochemical Engineering 3
CHEG 621 Metabolic engineering 3
CHEG 625 Green Engineering 3
CHEG 649 Molecular Biophysics 3
CHEG 650 Biomedical Engineering 3
CHEG 805 Multidisciplinary biotechnology 3

CPEG 630 Neurons and networks 3
ELEG 643- Biomedical Nanotechnology 3
ELEG 670 Biophysics of excitable membranes 3
ELEG 671 Introduction to biomedical engineering 3
ELEG 675 Image processing with biomedical applications 3
ELEG 678 Introduction to nano and biophotonics 3
ELEG 679 Introduction to medical imaging systems 3

MEEG 612 Biomechanics of human movement 3
MEEG 682 Clinical biomechanics 3
MEEG 683 Orthopedic Biomechanics 3
MEEG 684 Biomaterials and tissue engineering 3
MEEG 685 Control of human movement
MEEG 686 Cell and tissue transport 3

If you are interested, a current draft of the proposed degree program is spelled out in detail in the attached document.

Tom
Tom, Melinda,
Chemical Engineering supports your new professional masters degree in biotechnology.

Norm,

After looking this over a bit more, and considering the goals of the program given by Melinda, this has my support. Perhaps in the future we can consider ways to add courses that would be more approachable by non-engineers.

Best regards,
Anne

On 6/5/09 8:58 AM, "Wagner, Norman J." <wagnernj@admin.udel.edu> wrote:

Dear Anne (in Wisconsin so I'll do this by email),

I've looked through this and I support it. However, you should be included on any curricular decisions as Associate Chair for Biochemical Engineering. Please let me know if this is appropriate or if not, please raise any issues directly with Melinda to resolve them. My only comment is that we envision additional courses in the near future as we grow our biochemical engineering minor and faculty, and classes such as bioseparations and others that we envision offering in the years to come will probably be of interest to this biotech program (hence, the usual need to try and coordinate schedules as best as possible and to share information).
Melinda, glad to see programs like this! I've copied you as well as we have offered for over 30 years a 500 level class on intellectual property law, taught by an alumni, Al Uebler, that is very popular among our students and is very well taught. This may also be of value for your program.

Anne, if you are in agreement, I'll send the confirming email.

Subject: Biotechnology masters requires your approval

Dear Anette, Norm and Gonzalo,

A new professional masters degree in Biotechnology is being established at UD and we have been asked if we would allow the program to list some engineering courses as electives. To do so requires your support.

This is being organized by Melinda Duncan in Biological Sciences. In order for this to get university approval, Melinda will need confirmation from you (e-mail should suffice) stating that you are willing to allow courses in your department to be listed in the catalog as electives.

Some of the students in this program will have undergrad degrees in engineering and, of course, the prerequisites will remain intact so only qualified students will be
allowed to take these courses. They do not anticipate many students taking engineering courses, but the inclusion of engineering courses will add breadth to the program.

I support this and believe it would be good to allow this new program to include our courses.

The courses proposed are listed below (these are from the current UD catalog):

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEG 604</td>

September 17, 2009

To: Dr. John E. Sawyer, Associate Provost for Professional Education  
RE: PSM Degree Programs

Dear Dr. Sawyer,

The Department of Accounting and MIS is pleased to support the following two breadth courses for Professional Science Master's (PSM) degree programs:

- ENTR860 (HIGH TECH ENTERPRENEURSHIP) is offered during Spring semester. One section of the course is offered each year, and PSM may utilize open seats in existing classes.

- MISY840 (PROJECT MANAGEMENT AND COSTING) is offered during Spring semester. One section of the course is offered each year, and PSM may utilize open seats in existing classes.

The Department of Accounting and MIS is excited to be a part of this initiative and looks forward to seeing PSM and other students in the classroom.

Regards,

E-mail: geertsg@lerner.udel.edu
September 8, 2009

The Department of Business Administration is pleased to support breadth courses for Professional Science Master’s (PSM) degree programs.

The Department has submitted a proposal for a new breadth course, BUAD500 (SURVEY OF BUSINESS). Starting Spring 2011, one section of the course will be offered every year. The course will be available to PSM and other graduate students across campus who are not matriculated in graduate programs in the Lerner College of Business & Economics.

BUAD840 (ETHICAL ISSUES IN DOMESTIC AND GLOBAL BUSINESS ENVIRONMENTS) is offered during Fall and Spring semesters. Three or four sections of the course are offered each year, and PSM may utilize open seats in existing classes.

BUAD870 (LEADERSHIP AND ORGANIZATIONAL BEHAVIOR) is offered during Fall and Spring semesters. At least four sections of the course are offered each year, and PSM may utilize open seats in existing classes.

BUAD835 (MANAGING NEW PRODUCT DEVELOPMENT PROJECTS), BUAD831 (OPERATIONS MANAGEMENT AND MANAGEMENT SCIENCE) and BUAD871 (MANAGING FOR CREATIVITY AND INNOVATION) are options among a set of five courses; demand for these courses can be spread to use seats in available sections. BUAD831 and BUAD871 are offered regularly, while BUAD835 will be offered less frequently (not more than once per year and perhaps not every year).

The Department of Business Administration is excited to be a part of this initiative and looks forward to seeing PSM and other students in the classroom.

Regards,

Dear Professor Sawyer:

The faculty of the School of Urban Affairs and Public Policy voted unanimously to enthusiastically support the Professional Science Master’s Program (PSM Plus). I have reviewed the proposal and this program requires a selection from the following courses in the Government/Non-Profit track—UAPP 803, UAPP835, UAPP604, UAPP819, UAPP833, UAPP827, UAPP829, UAPP646, UAPP648 and UAPP650. We will make these courses available to the PSM Plus students on semesters in which they offered.

I look forward to working with you on this major and on other collaborations in the future.

Regards,

To: Melinda K. Duncan  
   Graduate Program Director  
   and Professor of Biological Sciences

From: Susan Brynteson  
   Vice Provost and May Morris Director of Libraries

I am responding to the request to supply information about the capability of the University of Delaware Library to support the proposal for the new Professional Science Master’s degree in Biotechnology.

The University of Delaware Library is well able to support the Professional Science Master’s degree in Biotechnology. Enclosed is a description of collections, resources and services available.

I would be pleased to respond to any questions.

SB/nb
Enclosure

c: George H. Watson, Interim Dean, College of Arts and Sciences,  
   and Unidel Professor of Physics and Astronomy  
Randall L. Duncan, Chairperson, Department of Biological Sciences,  
   and Professor of Mechanical Engineering  
Frederick Getze, Associate Librarian and Coordinator, Agriculture  
   and Marine Studies Libraries, Reference Department  
Catherine Wojewodzki, Librarian and Coordinator, Chemistry  
   and Physics Libraries, Reference Department
Report on Library Services and Collections in Support of the Professional Science Master’s Degree in Biotechnology in the College of Arts and Sciences

General Description

The University of Delaware Library includes the Hugh M. Morris Library, where the main collection is housed; three branch libraries located on the Newark campus, the Agriculture Library, the Chemistry Library, and the Physics Library; and a fourth branch library, the Marine Studies Library, located in Lewes, Delaware. The Library collections parallel the University’s academic interests and support all disciplines. In addition to collections which directly support the new degree proposal, the Library has strong collections in other areas that relate to the new degree proposal, such as Agriculture, Bioinformatics, Bioresources Engineering, Business Administration, Chemistry, Computer and Information Sciences, Environmental Studies, Food Sciences, Health and Exercise Sciences, Marine Studies, Materials Science, Mathematical Sciences, Mechanical Engineering, Nursing, Nutrition, Physical Therapy, Physics, Plant and Soil Science, and Statistics.

Books, periodicals, microforms, government publications, computer databases and other electronic resources, maps, manuscripts, and media provide a major academic resource for the University of Delaware, the surrounding community, the state of Delaware, and the nation. Library staff members provide a wide range of services, including reference assistance, circulation, interlibrary loan, instructional programs, and assistance to the visually impaired.

The University of Delaware Library is a U.S. depository library and a U.S. patent depository library and contains a complete file of every patent the U.S. Office of Patents and Trademarks has issued.

The online catalog, called DELCAT, provides access to millions of items by author, title, subject, and keyword.

Library collections number over 2,800,000. In 2008/2009, the Library Web www.udel.edu/library received over 1,600,000 virtual visits.

The University of Delaware Library is a member of the Association of Research Libraries, OCLC, the Center for Research Libraries, LYRASIS, CIRILA (The Chesapeake Information and Research Library Alliance), and NERL (NorthEast Research Libraries).

Specific Support for the Professional Science Master’s Degree in Biotechnology

Funds are designated at the beginning of each fiscal year for the support and strengthening of the collections including those related to Biotechnology and Biological Sciences. Support for the Professional Science Master’s Degree in Biotechnology is supplemented by funds used to purchase materials in the related areas noted previously as well as funds for the licensing of electronic resources.
The Library subscribes to many print journals and electronic journals which support biotechnology and biological sciences. A list of electronic journals by subject is available from the Library Web by clicking on “Electronic Journals” at the top of the main page <www.udel.edu/library/>. In addition to various reference sources in print (see the “Research Guides” section of the pertinent Subject Guides available under the section “Subject Guides A-Z” on the Library Web page), the Library also makes available several electronic databases which support Biotechnology and Biological Sciences, including AGRICOLA, Biological Abstracts, Biological and Agricultural Index Plus, Biological Sciences Set, BioOne, CAB Abstracts, Chemical Abstracts (SciFinder Scholar), Compendex, Environmental Sciences and Pollution Abstracts, Medline, Primal Pictures, and Web of Science.

In addition, the Library provides access to such important electronic databases as ABI/Inform, America: History and Life, EconLit, CASSIS, Expanded Academic ASAP Plus, General Business File ASAP, Historical Abstracts, LexisNexis Academic, LexisNexis Congressional Universe, LexisNexis Statistical Universe, New York Times (Historical), PAIS International, ProQuest Digital Dissertations (Dissertation Abstracts), Sociological Abstracts, and STAT-USA. Several databases incorporate the Library’s major linking service, Get It, for electronic access to the full text of journal articles. Census information and other demographic data are available as is a wide range of printed and electronic reference sources.

The Library also subscribes to RefWorks, a Web-based bibliographic and database management system that can be used with most databases, and has just released a major new service, WorldCat Local, which provides access to a vast number of resources in libraries worldwide. The Library also maintains an Institutional Repository (see: <dspace.udel.edu:8080/dspace/>), which archives research reports and documents and other resources produced by University of Delaware faculty.

The Library has a strong collection of videotapes and films which cover a wide range of subjects which could possibly relate to Biotechnology and Biological Sciences. The video collection is heavily used; is increasing in size; and there has been much consultation about it by Francis Poole, Librarian and Head of the Instructional Media Collection Department, with faculty in all areas.

A professional librarian, Frederick Getze, Associate Librarian in the Reference Department, serves as liaison to the faculty in the Delaware Biotechnology Institute. Catherine Wojewodzki, Librarian in the Reference Department, serves as liaison to the faculty in the Department of Biological Sciences. Suggestions for purchases received by the Library for materials related to these departments are directed to either Mr. Getze or Ms. Wojewodzki who also regularly consult faculty about priorities and the direction the collections should take. Mr. Getze and Ms. Wojewodzki are also available for instruction in the use of the Library for students and faculty. They maintain subject Web sites for Biotechnology and Biological Sciences which can be accessed from the Library Web <www.udel.edu/library/> by clicking on “Subject Guides A to Z” or directly by the URLs <http://www2.lib.udel.edu/subj/biotech/> and <http://www2.lib.udel.edu/subj/biol/>.

Subject: PSM biotechnology and Certificate

Dear Dr. Epifanio,

I am working with Cathy Wu on the professional science masters project at UD and am developing a PSM in biotechnology that will complement her efforts on the PSM in Bioinformatics.

We would like to include the following courses from your college as electives in our PSM

MAST 697- Bioinformatics programming for Biologists
MAST 618- Marine microbial ecology
MAST 698- Environmental and systems bioinformatics

If you would like to discuss this in any way, or have any concerns about this request I am available at your convenience.

Best,
