UNIVERSITY FACULTY SENATE FORMS

Academic Program Approval

This form is a routing document for the approval of new and revised academic programs. Proposing department should complete this form. For more information, call the Faculty Senate Office at 831-2921.

Submitted by: ___Melinda K. Duncan__________________________ phone number __0533_

Action: _____Request for New Concentration in Molecular Biology and Genetics for the M.S. in Biological Sciences

(Example: add major/minor/concentration, delete major/minor/concentration, revise major/minor/concentration, academic unit name change, request for permanent status, policy change, etc.)

Effective term ____08J__________________________

(use format 04F, 05W)

Current degree _______ MS ____________

(Example: BA, BACH, BACJ, HBA, EDD, MA, MBA, etc.)

Proposed change leads to the degrees of: __MS

(Example: BA, BACH, BACJ, HBA, EDD, MA, MBA, etc.)

Proposed names: ___ MS in Biological Sciences with a concentration in Molecular Biology and Genetics __________

Proposed new name for revised or new major / minor / concentration / academic unit

(if applicable)

Revising or Deleting:

Undergraduate major / Concentration:__________________________

(Example: Applied Music – Instrumental degree BMAS)

Undergraduate minor:__________________________

(Example: African Studies, Business Administration, English, Leadership, etc.)

Graduate Program Policy statement change: _________________

(Attach your Graduate Program Policy Statement)

Graduate Program of Study:__________________________

(Example: Animal Science: MS Animal Science: PHD Economics: MA Economics: PHD)

Graduate minor / concentration:__________________________

List program changes for curriculum revisions:

None, this proposal seeks to codify our ongoing departmental policies at the level of the University.

List new courses required for the new or revised curriculum:

(Be aware that approval of the curriculum is dependent upon these courses successfully passing through the Course Challenge list. If there are no new courses enter “None”)

None
Other affected units:
(List other departments affected by this new or revised curriculum. Attach permission from the affected units. If no other unit is affected, enter “None”)

None

Rationale:
(Explain your reasons for creating, revising, or deleting the curriculum or program.)

Our department has required all of our graduate students to complete the curricular requirements of a “track” for many years although the track curricular requirements were never approved at the university level. At the request of the Office of Graduate Studies, we submitted our graduate program policy to through the appropriate channels for approval. In February of 2008, it was suggested by the University Graduate Studies Committee that we further revise our curriculum to change the term “Track” to “Concentration” so that the student’s curriculum is noted on their transcript. This new proposal is in response to this request by the University graduate studies committee.

Program Requirements:
(Show the new or revised curriculum as it should appear in the Course Catalog. If this is a revision, be sure to indicate the changes being made to the present curriculum.)

See Attached.

ROUTING AND AUTHORIZATION:  (Please do not remove supporting documentation.)

Revised 11/03/04 /khs
Concentration in Molecular Biology and Genetics
Policy and Curriculum

The prospective student must meet all general requirements for the M.S degree in the Department of Biological Sciences. The curriculum described below was developed to ensure that students achieve the breadth of knowledge, written and oral communication skills, and proficiency in the practice of research expected of individuals holding an advanced degree with a specialization in Molecular Biology and Genetics. All students are expected to have basic competency in biochemistry, molecular biology and genetics upon admittance to the program since these fields underpin the training provided in this concentration. The biochemistry competency must be demonstrated by superior performance in a biochemistry course from another institution or by completing CHEM 641 (Biochemistry (core) with a B or better in the first semester of graduate enrollment. Acceptance of courses from other institutions is subject to approval by the Concentration Coordinator. Competency in Molecular Biology and Genetics is primarily assessed by the student's performance on the oral preliminary exam. However, all students are required to take a written diagnostic exam or equivalent after one semester of enrollment to help them assess their level of preparation for the preliminary exam. The results of this exam will be discussed with the student by the concentration coordinator to help the student plan a strategy to prepare for the preliminary exam.

Fall, Year One

Course Name(s) and Number(s)                              Credits
BISC 602 - Molecular Biology of Animal Cells (core)             3
BISC 864 or 868¹ - Research                                               3
BISC 827 - Graduate Research Seminar, course in oral presentation skills (core) 1
Teaching assistantship, development of oral presentation and teaching skills³ 0

Total: 7 credits

Winter, Year One⁴

Molecular Biology and Genetics diagnostic exam

Spring, Year One

Course Name(s) and Number(s)                              Credits
BISC 654 - Biochemical Genetics (core)                                          3
BISC 868 - Research in the laboratory of chosen thesis/dissertation advisor 3
BISC 827 - Graduate Research Seminar, course in oral presentation skills (core) 1
Teaching assistantship, development of oral presentation and teaching skills 0

Total: 7 credits

Summer, Year One
June

Preliminary examination

July and August

2 credits: BISC 868 - Research in the thesis/dissertation laboratory

Fall, Year Two

Electives

30 credits total for degree

All students also are required to complete one elective from the approved list. Choice of elective should be made with approval of the student’s research advisor.

BISC 605 - Advanced Mammalian Physiology
BISC 612 - Advanced Cell Biology
BISC 615 - Vertebrate Developmental Biology
BISC 625 - Cancer Biology
BISC 639 - Developmental Neurobiology
BISC 645 - Bacterial Evolution
BISC 646 - Plant Cell Biology
BISC 656 - Evolutionary Genetics
BISC 671 - Cellular and Molecular Immunology (4 credits)
BISC 679 - Virology
BISC 693 - Human Genetics
BISC 806 – Advances in Cell and Organ Systems
ANSC 644 - Bioinformatics
CHEM 645 - Proteins, Structure and Function
CHEM 646 - DNA-Protein Interactions
ELEG 673 - Signal Processing in Neural Systems
PLSC 635 - Plant Developmental Biology

Notes

1. M.S. students are encouraged to identify an advisor without tutorials. In this case, they would register for the appropriate number of BISC 868 credits instead of tutorial research. Such students should also form their thesis committee and have their first meeting by March of the first year.

2. BISC 827 - Graduate Seminar is required every fall and spring semester. Students will present oral summaries of their laboratory tutorials or ongoing research.

3. MS students are not explicitly required to serve as departmental teaching assistants but will do so in most cases.

4. Students are expected to spend winter and summer sessions in full time research towards the thesis.

5. BISC 869 - Master's Thesis, should be taken by M.S. students who have passed the Graduate Preliminary Exam.

Masters students must complete 24 credits of course work/research credit in addition to 6 credits of BISC 869 - Master's Thesis, prior to public defense of the research based Master's thesis.

If any graduate courses equivalent to those listed above have been taken in previous graduate degree programs and have been accepted as graduate level transfer credit by the University, the transferred courses may be used to satisfy the Concentration requirements with the approval of the Concentration coordinator.

Other courses in addition to those listed above may be taken upon the advice of the student's advisor and thesis/dissertation committee, but these will not substitute for approved electives.

The Preliminary Examination

Graduate students in the Molecular Biology and Genetics Concentration are expected to possess a fundamental body of knowledge in biochemistry equivalent to CHEM 641, molecular/cellular biology equivalent to BISC 401, and genetics equivalent to BISC 403 as well as the ability to critically analyze scientific literature. See the core competency list for more details. To ensure that this is the case, an oral preliminary examination will be administered to all graduate students in the Concentration at the end of their first year of study.
In order to be eligible to take the preliminary exam, students must have completed first year core courses (CHEM6411 if needed, BISC602, and BISC654) with a grade of B or better. In all cases, the student is expected to correct all deficiencies in their performance in the first year curriculum by the end of the semester after the deficiency occurred but no later than the end of their third semester in the program. If the applicable course is not offered, a suitable substitute will be determined by the Concentration coordinator. Failure to obtain a B or better in a required course in the second attempt will make the student subject to dismissal from the graduate program. Students are expected to take the preliminary exam within six weeks after the first year curriculum has been successfully completed. If the student fails to complete the preliminary exam by this time, the student will be subject to dismissal.

Procedure

Students will be provided with at least four sets of papers from the primary literature selected by faculty from which they must choose one set as the basis for their oral examination. These papers will be available at least six weeks before the exam, usually no later than May 1 [for students admitted in the summer or fall], so that the exam can be administered the second or third week of June. Students admitted in the Spring will usually have paper sets available by December 10 so that the exam can be administered in late January. Four weeks prior to the exam, the student should inform the Concentration coordinator of the chosen paper set and arrange the time of the exam. Prior to the exam, the student should prepare transparencies of all of the figures and tables presented in the papers so that they will available for discussion during the exam.

During the exam, the student will be tested by a committee of four to six faculty on his/her comprehension of all aspects of the paper including background and related information. Students present a 10 minute synopsis of the primary paper, then the examination committee will ask questions pertaining to the paper's background material, methodology, experimental results and their significance, the article's overall significance to the field as well as the topics found in the list of core competencies. It therefore is imperative that the student searches and reads the literature for background and related information. While a good starting point is the bibliography at the end of the chosen paper set, it is likely that other primary literature sources will need to be consulted. Prior to the exam, students are encouraged to contact faculty to discuss the topics they are responsible for and to clarify difficult concepts.

Grading

After the oral examination, the examination committee will determine an appropriate grade. Four grades are possible at the initial exam: unconditional pass, conditional pass, re-examination or failure. If the student receives an unconditional pass, the exam was completed satisfactorily and no conditions are applied. In a conditional pass, the student performed marginally in one or more areas and may be asked to complete (with a grade of B or better) one or more courses as a condition for changing the grade to pass. The examination committee may prescribe conditions in addition to, or in lieu of, course enrollment. Once the condition is fulfilled, the student is responsible for informing both the Biology Graduate Program Director and the Concentration Coordinator so that the grade can be changed officially. If the student receives a re-examination, the student's performance was unsatisfactory and the exam should be repeated within three months, but no later than six months after the initial examination. Only one retake will be permitted. This would normally be prior to the start of the fall semester for June examinations, and during Spring break for January examinations. If the student receives a failure, the student's performance strongly indicated an inability to complete an independent research project and the student will be terminated from the Molecular Biology and Genetics concentration without the possibility of a retest. If the student does not perform satisfactorily in a re-examination, the student will be terminated from the Concentration in Molecular Biology and Genetics and recommended to the Graduate Affairs Committee for dismissal from the graduate program.

Once the student passes the preliminary examination, he/she becomes eligible to register for Master’s thesis credit.
